

# Средство моделирования Mininet. Установка и пример моделирования.

Администрирование локальных сетей

- Mininet – это виртуальная тестовая среда, предназначенная для разработки и тестирования сетевых инструментов и протоколов.
- Сети в Mininet создаются с помощью Python-скриптов.
- **Цель доклада:** разобраться с установкой Mininet на Windows, провести эксперимент.

## Установка и настройка Mininet
